

Install the OFB Order CSV Exporter

This Chrome extension is required to create the unified Oregon Food Bank CSV that FEED accepts.

Before you begin: Use Google Chrome on a desktop or laptop. Download the package from FEED, then unzip it before opening Chrome. Do not select the ZIP file when Chrome asks for the extension folder.

Install the extension

1

Download and unzip the package

In FEED, open **Information > Data Management > Import OFB Data**. Select the **OFB Order CSV Exporter Chrome Extension** download link. Open the downloaded ZIP and extract it to a folder you can keep, such as Documents.

2

Open Chrome Extensions

In a new Chrome tab, enter **chrome://extensions** in the address bar and press Enter. Chrome does not allow ordinary web links to open this internal page, so type or paste the address.

3

Turn on Developer mode

Switch **Developer mode** on in the upper-right corner. The **Load unpacked** button will appear.

4

Load the unzipped extension folder

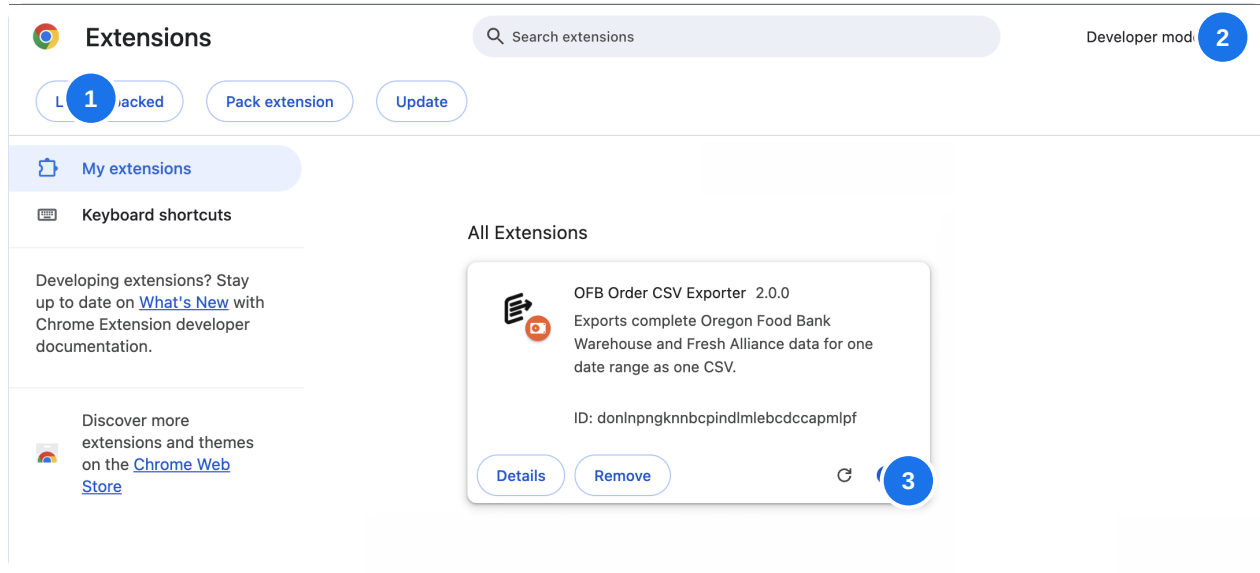

Select **Load unpacked**. Open the extracted package and choose the folder named **OFB-Order-CSV-Exporter-v2.0.0** - the folder that contains **manifest.json**. Select Folder/Open to finish.

Keep the extracted folder. Chrome loads this custom extension from that location. Moving or deleting the folder can disable it.

Google reference: [Load an unpacked extension](#).

Confirm the installation

Your Extensions page should resemble the example below.

1 Load unpacked

2 Developer mode is on

3 Exporter is active

5

Verify the extension is active

Find **OFB Order CSV Exporter 2.0.0**. Its switch should be on. If it is off, turn it on.

6

Open or reload Primarius Order History

Sign in at ofb.primarius.app and open **Order History**. If the page was already open during installation, reload it once.

7

Export the unified CSV

Choose the inclusive Start date and End date, then select **Export unified CSV**. Keep the Primarius page open until the exporter reports success and downloads the CSV.

8

Import the CSV into FEED

Return to **Information > Data Management > Import OFB Data**. Drop or choose the exported CSV, then select **Import Data**.

If something is not working

The export button is missing: Confirm the extension switch is on, then reload Order History.

Chrome reports an extension error: Remove the card, unzip a fresh package, and use Load unpacked again.

You receive a newer package: Replace the extracted folder, then select the refresh icon on the extension card.

Privacy: The exporter runs only on matching Primarius Order History and View Order pages. It uses your existing signed-in browser session and does not collect credentials or send Primarius data to another service. For support, use the [OFB Order CSV Exporter issue tracker](#) without posting order data or login information.
